Seeking a full-time position in Machine Learning, Deep Learning and Data Science

EXPERIENCE

Machine Learning Engineer

July 2019 - Current

Kalepa – New York, NY

- Experience working end-to-end on machine learning systems for insurance underwriters
- Ingested data from multiple open sources and scripted the normalization procedure
- Created an NLP pipeline to train and deploy deep learning models in a rapid environment
- Deployed classic ML and DL models on SageMaker and GCP to provide predictions to various insurance firms
- Created 20 different unsupervised models with Spacy to provide inference on unlabeled data
- Work with various underwriters to understand their needs and how it can be helped through machine learning

Deep Learning Research Intern

June 2018 – November 2018

Frenzy.ai – New York, NY

- Improved the multiple R-CNN models to identify fashion items in images and increased accuracy by 30%
- Contributed to implementation of a Pose Estimation model to identify the structural pose of the humans in images
- Created a Hierarchical CNN model to classify fashion items in images

Project Intern

January 2016 – April 2016

Indian Space Research Organization – Satellite Centre – Bengaluru, India

- Implemented computer vision algorithms on the Chandrayaan-2 project with Controls Division and Electronics Group
- The algorithm helps the lunar rover identify the distance of objects seen by its stereoscopic camera

PROJECT

Plant Tracer

February 2019 – May 2019

Object Tracking – Python, PyTorch, Caffe2, OpenCV, Data Annotation

- Annotated a dataset of time-lapse videos which capture the movement during growth of a plant
- Trained an image-comparison regression-based tracking architecture to track the movement of the plant

News Dashboard

October 2018 – December 2018

Big Data Analytics – Docker, Python, Spark, Kafka, MongoDB, NLTK, Scikit-Learn, BeautifulSoup, Sumy, Zeppelin

- Designed a scalable big data architecture to ingest news articles from multiple news sources, perform summarization on these articles using big data technologies
- Keyword extraction was also performed on these articles to provide insights and visualizations

Colorizing Grayscale Images

March 2018 – May 2018

Image Colorization using Generative Adversarial Networks – Python, TensorFlow, Keras, PIL

- Implemented a novel CNN and DC-GAN architecture to add colors to grayscale images

Background Separation using U-Net

October 2017 – December 2017

Image Segmentation using Dense Networks – Python, TensorFlow, Keras, Scikit-Learn, Pandas

- Utilized a U-Net architecture model to generate a mask over car images to separate the car from background

EDUCATION

Master of Science in Electrical Engineering – 3.583

May 2019

New York University – New York, NY

Courses: Machine Learning, Image and Video Processing, Programming for Big Data Analytics, Audio Content Analysis, Digital Signal Processing, Robot Localization and Navigation

Bachelor of Engineering in Electronics and Communication Engineering – 3.653

June 2016

Visvesvaraya Technological University – Belgaum, India

Courses: Digital Signal Processing, Image Processing, Engineering Mathematics

TECHNICAL SKILL

Languages: Python, MATLAB, C++, Java, SQL, JavaScript

Tools: TensorFlow, PyTorch, Fastai, Keras, Scikit-learn, Pandas, OpenCV, NLTK, Spacy, Hadoop, Spark, Git

Skills: Computer Vision, Deep Learning, Supervised/Unsupervised Classification, Machine Learning, Generative Adversarial Networks, Exploratory Data Analysis, Data Visualization
